INSTALLATION INSTRUCTIONS

LOCATE AND REVIEW ANY CONSTRUCTION PLANS AND INTERLUX RECORD DRAWINGS FOR ALL FIXTURE RUNS.

It is recommended to locate and lay out all components for each fixture "run". A fixture run typically consist of endcaps, joiners, lengths of housings with diffuser, and lengths of gear trays (satellite and master). BE SURE TO IDENTIFY ALL CORRECT LENGTHS FOR EACH FIXTURE RUN.

Step 1: Turn off Power before Installing.

Remove diffuser from housing and lay off to the side. Starting with first housing, install SM100LDL endcap using screws provided in endcap kit. (If single fixture install endcaps on both sides of housing)

Step 2: Mount housing to surface using mounting screws (0.25" diameter pre-drilled holes). Mounting screw must be able to hold weight of the fixture)

Step 3: (If single housing skip this step) Assemble Bent joiners. Place one bent joiner assembly and one straight joiner on each side of housing as seen below. Tighthen set screws using Allen Key.

Step 4: (If single housing skp this step) Place next housing in ceiling end to end with first housing, slide joiners across housing seam so they are joining both housings. Tighten set screws on bent joiners, tighten the M4 Cap screw on bent joiners, tighten set screws on straight joiners. Mount housing. Repeat steps 3-4 until all housing are installed and mounted. Install endcap on last housing as seen in step 1.

Step 5: Feed power cables through feed hole in housing. Install 100LDL Gear Trays making electric connections first then insert gear tray into housing. Refer to pages 2&3 for wiring diagrams if needed. Refer to record drawings for gear tray placement. Secure gear tray to housing using provided screws in pre-drilled holes. If needed, slightly compress sides of housing to properly align gear tray holes with housing. Repeat this step until all gear trays are installed.

Step 6: Re-install diffuser and ensure it is flush along the length of the run. Energize and test for proper operation.
