ITEMS NEEDED (SUPPLIED BY OTHERS):

INSTALLATION INSTRUCTIONS

LOCATE AND REVIEW ANY CONSTRUCTION PLANS AND INTERLUX RECORD DRAWINGS FOR ALL FIXTURE RUNS.

It is recommended to locate and lay out all components for each fixture "run". A fixture run typically consist of joiners, lengths of housings, lengths of gear trays with diffuser(satellite and master), blank gear trays, and endcaps or wall returns. BE SURE TO IDENTIFY ALL CORRECT LENGTHS FOR EACH FIXTURE RUN.

Step 1: Turn off Power before Installing.

Optional Pre-mounting: When roughing in wall and ceiling structure, install 1.5"x1.5" sheet metal angle, 0.025" maximum thickness, to support housing extrusion, optional but will aid in installation. Mount housing extrusion to the mounting surface at desired height with fasteners. Mounting screws shall be fastened to building frame. Surrounding structure is required to support the weight of the fixture. **(Recommended: start at end wall for linear fixtures or corner for rectangular and U-shapes.)**

Optional

Step 2: (If single housing skip this step) Mount next housing extrusion as shown by sliding the provided joiners into the adjacent housing. Secure in place by tightening set screws. Mount housing to structure. Repeat this step until all housings are installed and mounted.

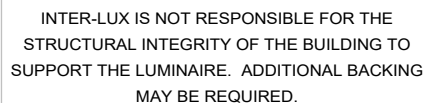

Steps 3&4: ENDS - *Ends can have endcaps, wall returns, one of each or neither.

3: Endcaps - **(If no endcaps skip this step)** Install endcaps on end(s) of run.

4: Wall Return - **(If no wall returns skip this step)** Install wall returns on end(s) of run.

Step 5: Install 5/8" drywall to the underside of the extrusion housing and fasten with 1.25" drywall screw 2" from extrusion nose. Apply joint tape and mud to form a smooth taper from flat to extrusion nose. Apply multiple thin coats to ensure a smooth taper. Prime and paint.

Step 6: Install Gear Trays making electric connections first, then insert gear tray into housing. Refer to pages 2&3 for wiring diagrams if needed. Refer to record drawings for gear tray placement. Secure gear tray to housing using screws in pre-drilled holes. Repeat this step until all gear trays are installed. Energize and test for proper operation.
